

MUJHACKS 2.0 TIMELINE AND WALKTHROUGH

JUDGING CRITERIA

MUJHACK's is a hackathon at which teams of programmers and designers (students) collaborate for a short period of time on a project.

Each team gets 3 minutes to show off their project for the audience and judges. In "Science Fair" style judging and judges view the projects, ultimately marking them after their end submission.

But if you're a hackathon judge, how do you choose the best project? It's a difficult question to answer, because "best" is clearly a subjective term.

Instead of attempting the impossible task of finding the "best" hack, try following the tips below.

General Criteria

- Innovative (30 Points)
- Useful (10 Points)
- Fits theme of the Hackathon (10 Points)
- UI/UX Design (15 Points)
- Application of technologies (15 Points)
- Economic & Scalable (10 Points)

Additional criteria may include:

Technical Difficulty

Is the project technically impressive? Complex? Does it seem remarkable that someone could achieve this hack in just a day or two?

Polish

You can't expect a completely polished, ready-to-go project at the end of a hackathon. But you can look for some degree of polish, thought, and effort. Does the hack work? Did the team achieve their goals and accomplish what they set out to do?

"Wow" Factor

Sure, this one is hard to judge, but hackathons are all about exciting innovation and surprising solutions to problems. Look for a project that makes you say, "Wow!" You can also take into account the reactions of the other hackers. Which projects seem to really amaze and excite the audience?

Future Plans

Depending on the purpose or goal of the hackathon you're judging, you may also consider the team's future plans for their hack. Does the hack seem practical and viable? (Sometimes, the organizers will prefer that you consider creativity more than business potential, but it depends on the event.)

Try to settle on around five categories, so the judging doesn't get too complicated.

Bonus Points:

Revenue Model:

Is there a proper revenue model for the idea implemented?

If yes, there is a bonus points of 5 depending upon the flexibility/strength of the revenue model.

Use of API's

Using existing API's provided by the organizers will fetch the team 5 more bonus points.
